Procedures and tests for suspected prostate cancer

You have been referred for assessment by the specialist health service because there is a suspicion of a cancer diagnosis. Specialised procedures and tests will determine whether or not you have cancer. If these procedures and tests show that you do have cancer, your treatment will be planned in consultation with you.

You have been referred for assessment via the Cancer pathway for prostate cancer. The Cancer pathways are intended to give patients and relatives predictability and security and are national standardised pathways which are discipline-based. The aim is to accelerate your assessment and the start of treatment and minimise waiting times, in order to make the assessment as predictable and stress-free as possible for you.

The Cancer pathways define the number of calendar days that each part of the assessment should take. Pathway timescales are targets rather than absolute requirements. For some patients, there will be medical reasons why the Cancer pathway should be longer or shorter than the timescales stated in the national pathway.

- **Procedures and tests for suspected cancer**

The aim of the assessment and the procedures and tests you will undergo is to determine whether or not you have cancer.

You may also be referred for assessment for a different illness. If the procedures and tests indicate that you have cancer, you will be given information on possible treatments and what will happen next.

You will be told about the procedures and tests that are relevant for you and when they will be carried out.

All hospitals that investigate and treat cancer patients have their own cancer pathway coordinators, who will make the necessary preparations for your pathway by booking appointments for your procedures and tests. You can contact the cancer pathway coordinator if you have any questions concerning practical matters relating to your assessment, appointments, etc. The cancer pathway coordinator is often a nurse, but he or she may also have a different background.

Medical questions will be answered by a doctor.

- **Assessment phases**

The assessment will normally be completed within 34 days. For medical reasons, it may sometimes take longer. The assessment period is the period from receipt of the referral by the hospital until the assessment has been completed and it has either been confirmed that you do not have cancer, or you have been given a diagnosis and a decision has been taken as regards your treatment. The timescales are defined in the Cancer pathway for prostate cancer.

The various phases of the assessment and the treatment	Comments	Recommended within						
<p>Phase 1: This is the period from receipt of your referral by the hospital until your first appointment for procedures and tests in the pathway</p>	<p>The cancer pathway coordinator will book the necessary appointments for your procedures and tests.</p>	<p>10 calendar days</p>						
<p>Phase 2: This is the period from your first appointment for your procedures and tests in the pathway until completion of your assessment</p>	<p>During this period, you will undergo procedures and tests to determine whether or not you have cancer.</p> <p>A clinical examination of the prostate gland is common. Blood samples will also be taken, including a prostate sample for prostate-specific antigen (PSA) analysis. If cancer is still suspected, a biopsy will be taken, i.e. a sample of tissue from the prostate gland. Many patients also have an MRI scan.</p> <p>Other procedures and tests may be necessary. You will be told about these as you attend your appointments. Once the results of the assessments are available, it will normally be possible to say whether or not you have cancer. A decision concerning diagnosis will then be taken. If you do not have cancer, the Cancer pathway will be concluded.</p>	<p>24 calendar days</p>						
<p>Phase 3: This is the period from you being diagnosed as having cancer and completing all the tests and procedures in the pathway until the start of your treatment</p>	<p>If you have cancer, your treatment will now be planned. Any decision concerning your treatment will be taken in consultation with you, normally based on an assessment by a multidisciplinary team.</p> <p>For patients with prostate cancer, one or more of the following possible treatments may be appropriate: active monitoring, surgery, radiotherapy, medicinal treatment.</p>	<table border="1"> <tr> <td data-bbox="642 895 818 1054">Surgery</td> <td data-bbox="818 895 1022 1054">32 calendar days</td> </tr> <tr> <td data-bbox="642 1054 818 1214">Medicinal treatment</td> <td data-bbox="818 1054 1022 1214">3 calendar days</td> </tr> <tr> <td data-bbox="642 1214 818 1342">Radiotherapy</td> <td data-bbox="818 1214 1022 1342">32 calendar days</td> </tr> </table>	Surgery	32 calendar days	Medicinal treatment	3 calendar days	Radiotherapy	32 calendar days
Surgery	32 calendar days							
Medicinal treatment	3 calendar days							
Radiotherapy	32 calendar days							

Patients with prostate cancer will normally start treatment within 37 to 66 calendar days from the date on which the hospital receives the referral. For medical reasons, it can sometimes take longer. Your doctor will tell you what to expect and give you more information on your Cancer pathway.

For more information, visit helsenorge.no/prostatakreft. The hospital that assesses you will also have information on its website.
