Stakeholder presentation at webinar and workshop, Diet and sustainability

24 September 2020

Anne Scott

Some questions and dilemmas

1. How does the integration of sustainability influence the recommendations for the individual nutrients? Does it become relevant to decrease some of the recommendations from the perspective of sustainability?
2. Is it relevant to evaluate whether nutrients such as EPA and DHA can be partly replaced by ALA from more sustainable sources?
3. Is it possible for the Nordic Nutrition Recommendations to include information on different sustainability parameters for different foods?
