Lyngby, Denmark</li></ul>

### **1. Discuss PI/ECOTSS for SR 2-5 and protocol for SR 1**

The Committee will prioritize 10 PI/ECOTSS for Systematic Reviews (SRs). The prioritisation of PI/ECOTSS is decided in a modified Delphi process. In order to comply with transparency, we have started to develop a paper on this process which should be ready for publication in a scientific journal Q1 2021. The five first topics for SR are now selected. The protocol for the first topic is soon to be ready and will be published in PROSPERO. The PI/ECOTSS for topic two to five was adjusted at this meeting after comments from the SR Centre. The protocols for these topics will be developed during the next months. The last five priorities will be initiated by mid-2021. Before initiating the last five SRs, another Delphi round with ranking among the NNR2022 Committee will be performed.

### **2. Sustainability (status)**

The Nordic Council of Ministers have requested that sustainability should be incorporated in NNR2022. Since the scientific knowledge is rapidly evolving and the environment, food supply, and habits are rapidly changing, a timely update of the evidence is important to form the best basis for health and nutrition promotion initiatives. NNR2012 included a chapter on sustainability. NNR2022 will now fully integrate sustainability into dietary reference values (DRVs) and food based dietary guidelines (FBGDs), where relevant. We plan to develop 3 background publications that will serve as the fundament for integration of sustainability in NNR2022. The NNR2022 Committee is now in the final phase of establishing the expert group that will work on this task. When the expert group and the final outline for the papers are ready, information will be published at the project official webpage. The NNR2022 Committee also plan for a new webinar this spring. More information will come.

### **3. Scoping Reviews**

This point postponed until the next meeting.
